

ABDELRAHMAN ASHRAF MOUSTFA

Cairo, Egypt | abdelrahman.a.moustfa@gmail.com | +20 1149513460 | linkedin.com/in/abdelrahman-ashraf1
PROFESSIONAL SUMMARY

Cybersecurity student and entry-level VAPT trainee targeting a Penetration Testing Internship. Hands-on practice in network penetration testing, Linux/Windows privilege escalation, web application security, vulnerability assessment, and technical reporting using Nmap, Burp Suite, Wireshark, Nessus, and Metasploit. Focused on clear evidence collection, reproducible testing, and remediation-focused documentation.

EDUCATION

B.Eng. Cyber Security and Data Analysis | Menoufia University, Faculty of Electronic Engineering | 2023 - 2028

TRAINING & HANDS-ON EXPERIENCE

Vulnerability Analyst and Penetration Tester - DEPI | Trainee | Jul 2026 - Present

- Currently enrolled in the DEPI VAPT track. The curriculum includes Network Penetration Testing, Active Directory security, Web Vulnerability Assessment, and Mobile Application Security.

Cybersecurity & Penetration Testing Diploma - Instant | Student / Trainee | Jan 2026 - Present

- Hands-on training across network penetration testing, Linux/Windows privilege escalation, web application security, and broader VAPT methodology using Kali Linux, Nmap, Wireshark, Nessus, Metasploit, and Burp Suite.
- Practiced reconnaissance, scanning, enumeration, vulnerability validation, attack-surface mapping, and documented findings using scope, reproducible steps, evidence, impact, and remediation recommendations.

SOC Analyst Internship - Archon Security | Intern | Nov 2025 - Dec 2025

- Triaged security alerts and reviewed suspicious endpoint/network activity using Sysmon, ProcMon, Process Explorer, TCPView, Netstat, Tasklist, and Wireshark; created basic IOC and incident notes.

PROJECTS & LABS

Internal Penetration Testing - Project Ban-Win7 | Windows 7 Lab

- Conducted a controlled internal assessment and produced a 5-page penetration testing report covering scope, technical walkthrough, evidence, severity, impact, and remediation recommendations.
- Documented 5 findings, including full system compromise, plaintext credential disclosure, spyware persistence, offensive tooling, and information leakage.

Selected Vulnerable-Machine Labs | Kioptrix Level 1, Metasploitable 2, Moria 1.1, Tomghost

- Completed 4 controlled vulnerable-machine labs involving host discovery, port scanning, service enumeration, vulnerability validation, exploitation, and privilege escalation.

Web Security Practice | Burp Suite, HTTP, Browser DevTools

- Intercepted and modified HTTP requests, reviewed parameters and cookies/sessions, and practiced basic authentication and input-handling tests in legal lab environments.

TECHNICAL SKILLS

VAPT: Reconnaissance, scanning, enumeration, vulnerability assessment/validation, exploitation basics, privilege escalation, reporting

Web Security: HTTP/HTTPS, request/response analysis, authentication testing basics, cookies/sessions, OWASP Top 10 fundamentals

Tools: Kali Linux, Nmap, Wireshark, Nessus, Metasploit, Burp Suite, LinPEAS, WinPEAS

Systems & Scripting: Linux, Windows, Windows Server, Ubuntu, Python basics, Bash basics, PowerShell basics, C/C++

CERTIFICATIONS

- Penetration Testing - Instant | In Progress
- SOC Analyst - Archon Security | 2025
- Cybersecurity for Beginners - Mahara-Tech
